

How to install Transcriber 1.5.1 with bugfix

The latest version of Transcriber is 1.5.1. However, due to a bug in that version it is impossible to extract and save smaller parts of an audio file. Fixing this bug is simple - simply follow the steps below:

1. Download Transcriber from here [Transcriber 1.5.1 \[http://sourceforge.net/projects/trans/files/transcriber/1.5.1/\]](http://sourceforge.net/projects/trans/files/transcriber/1.5.1/)
2. Install it
3. Download and extract [Bugfix for Waveform.tcl](#)
4. Copy previously extracted Waveform.tcl to

```
C:\Programme (x86)\Transcriber\lib\transcriber1.5\tcl\
```

Optional but recommended steps:

1. Download and extract [config file for ICE-Tagset](#)
2. Start Transcriber
3. Open menu "Options", click "Load configuration file..." and select previously extracted icemalta.cfg
4. Open menu "Options", click "Save configuration"
5. Done!
