## Designing questionnaires with LimeSurvey

## I. Hints on what to consider when creating a questionnaire

- 1. Introduction: provide vital information i.e. who you are and why you are doing a survey
- 2. Provide a not on privacy
- 3. A questionnaire should be created according to the KISS principle → Keep It Short and Simple The length of the questionnaire already tells people in advance how long it will take them to answer. Usually people are not willing to answer a 10 page questionnaire! Important: the questionnaire should not be too short, however, because the reliability will then decrease
- 4. Do not use negative statements, as this may lead to confusion
- 5. Try to avoid the word `and` because maybe only one part applies to the participant and then he/she will not know what to pick
- 6. Try to avoid conditional sentences as the person might not be able to identify with the statement (example: if I were a woman → if the person was a man he cannot relate to the question)
- 7. Avoid items with intensity or frequency indications
- II. How to create a questionnaire with Lime Survey with the help of screenshots a)
