Areas of responsibility:

- Development of a web application for the Dare2Del project
- Creation of documentation and instructions to use the web application

Requirements:

- Knowledge of web application development languages such as HTML, CSS, JavaScript
- Knowledge of JavaFx and other developmental frameworks
- Knowledge of Database
- Version control system like Git or similar version control system
- Knowledge of Inductive Logic Programming
- Ability to work in a team with commitment and flexibility
- Good communication skills

About Dare2Del

Dare2Del is a system designed as a context-aware cognitive companion to support the forgetting of digital objects. The companion will help users to delete or archive digital objects which are classified as irrelevant and it will support users to focus on a current task by fading-out or hiding digital information which is irrelevant in a given task context. The core of the companion is based on inductive logic programming (ILP). For more information about the project, please visit at <https://dare2del.de/>

Please submit your applications as soon as possible. Applications for the position should be sent as a single **PDF file** to: ute.schmid@uni-bamberg.de and should be supported with the following documents (If possible please submit the motivation in English):

- a short letter of motivation (in approximately 300-500 words),
- work sample on Github or similar platform (if available)
- Latest transcript, and
- Curriculum Vitae.
